

“All people, no matter where they live, no matter what their age, have a right to access high quality and affordable healthcare.”

Integrated Health

People Centered High Quality Affordable Healthcare

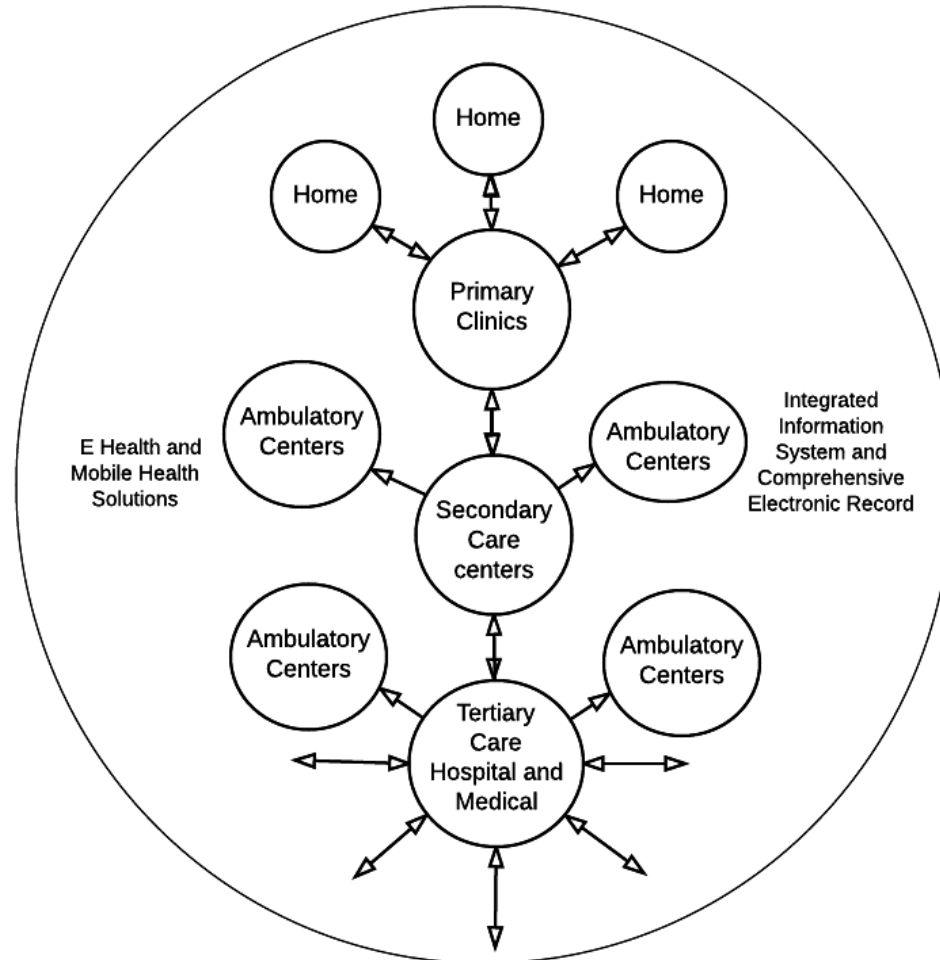

Siddhartha Bhattacharya and William Haseltine

*Taara Chandani and Rohini Kalvakuntla of ACCESS Health
contributed to the conceptual development of the Integrated Healthcare concept*

Integrated Healthcare provides universal high quality health for all at a price governments and cities can afford.

Network Diagram of an Integrated Healthcare System

Integrated Healthcare:

Brings healthcare to homes and communities

Creates a network of high quality care for all citizens

Delivers a majority of care at home, in clinics and in ambulatory care centers

Integrated Healthcare Requires:

Comprehensive, transparent, real time information systems

Continuous monitoring and accountability

Focus on value: health outcomes and patient satisfaction divided by cost

Integrated Healthcare is possible due to the advances in:

Information Technology

Communications Technology

Remote Monitoring

Diagnostic Technology

Surgical techniques

Integrated Healthcare

Reduces healthcare disparities

Provides access to high quality care to rural and peri urban communities.

Implementation of Integrated Healthcare by National and State Governments:

Establish an outcome based payment system

Focus on preventive and primary health

Create a nationwide comprehensive electronic health record linked to a comprehensive identification system

Implement interoperable data standards that combine patient data, quality, and financial information

Measure patient satisfaction

Strengthen governance and financial accountability
